

## The *ChangeMapping* Approach to Problem Identification and Problem Solving

**What:** *ChangeMapping* is a tool that organizations can use to identify problems and suggest solutions. It builds on the Force Field Analysis process developed by Kurt Lewin.

### Characteristics:

- ✓ 6 hour workshop
- ✓ Employs a small group model (5-30 participants)
- ✓ Is collaborative in nature

**Prerequisite:** All staff must be involved in identifying problems and possible solutions

### Workshop Outcomes:

1. Clearly identify the positive and negative affects factors that affect a specific problem
2. See where change is possible and where it is not
3. Identify changes that will have the most impact in solving a problem and
4. Develop a plan to solve the problem.
